

# AquaTex™ 720

WASTEWATER RESOURCES INC.

**A**quaTex™ 720 was developed and designed for small laundries, hotels, and resorts as the latest version of the AquaTex™ 360, the most successful and prolific laundry recovery system in the industry. Reclaiming billions of gallons over the last 10 years. While the 360 only treated the hot side of the laundry AquaTex™ 720 can also treat tempered water.

The AquaTex™ 720 is a fully automated system, using state of the art Allen Bradley PLC technology. This technology offers user friendly touch screen programming, computer monitoring, and full reach back capabilities to WRI's manufacturing facility.

The reclamation process starts by collecting your waste stream prior to sewer discharge. The water passes thru a 10-micron vibrating shaker screen and 5-micron tubular backwash filters for loose particle separation. The water then flows thru an advanced oxidation reactor before the final step of complete disinfection by an ultraviolet light chamber. Water may then be reintroduced into the wash wheel with no effect on chemical additional, product quality, or laundry operations.

AquaTex™ 720 can significantly reduce your water, sewer, and energy cost, resulting in quick financial paybacks.

The WRI AquaTex™ 720 System

## Customer Designed Systems, Tailored To Your Operation

### Design Philosophy

- Fully Automated
- Operator Friendly
- Stainless Steel Construction
- Small Footprint

### Advantages

- Reduces water/sewer consumption up to 58%
- Lowers energy cost
- Quick financial payback
- Protects the environment
